SESSION 15

HIGHER LOWER GAME

HIGHER LOWER GAME INI MENEBAK FOLLOWER YANG LEBIH
TINGGI DAN YANG RENDAH. PERTAMA TAMA BUATLAH 2 FILE PY
UNTUK MEMBERIKAN LOGO DAN GAME DATA

CONTOH .LOGO

BUATLAH LOGO GAME DAN LOGO
VS

BUATLAH GAME DATA

```
1 data = [  
2     {  
3         "nama": "Alya Pratama",  
4         "follower_count": 128000,  
5         "description": "Lifestyle & daily vlogs, coffee lover, simple aesthetic content.",  
6         "country": "Indonesia"  
7     },  
8     {  
9         "nama": "Kenji Sato",  
10        "follower_count": 542000,  
11        "description": "Tech reviews and gadget tips, focuses on budget-friendly setups.",  
12        "country": "Japan"  
13    },  
14    {  
15        "nama": "Sofia Alvarez",  
16        "follower_count": 89000,  
17        "description": "Food creator sharing quick recipes and street food hunts.",  
18        "country": "Mexico"  
19    },  
20    {  
21        "nama": "Carter",  
22        "follower_count": 310000,  
23        "description": "Fitness coach posting home workouts and nutrition reminders.",  
24        "country": "United States"  
25    }  
26 ]
```

DATA INI BERGUNA
UNTUK DIGUNAKAN DI
MAIN.PY

BIT VS BYTE

While a bit is the smallest unit of information that a computer can understand, a byte is a string of 8 bits. A byte is also known as a unit of memory size.

STEP 1

```
import random  
from logo import logo_game, logo_vs  
from game_data import data
```

IMPORT LOGO DAN GAME DATA

UNTUK MENULISKAN FORMAT YANG RAPIH DAN MENGEK JAWABAN

```
def format_data(account): 2 usages
    account_name = account["nama"]
    account_descr = account["description"]
    account_country = account["country"]
    return f"{account_name}, a {account_descr}, from {account_country}"

def check_answer(user_guess, a_followers, b_followers): 1 usage
    if a_followers > b_followers:
        return user_guess == "a"
    else:
        return user_guess == "b"
```

BUAT SCORE DAN SHOULD CONTINUE

```
print(logo_game)  
score = 0  
game_should_continue = True  
account_b = random.choice(data)
```

WHILE LOOP

```
while game_should_continue:

    account_a = account_b
    account_b = random.choice(data)
    if account_a == account_b:
        account_b = random.choice(data)

    print(f"Compare A: {format_data(account_a)}")
    print(logo_vs)
    print(f"Against B: {format_data(account_b)}")

    guess = input("who has more followers? type 'A' OR 'B' ").lower()

    a_follower_count = account_a["follower_count"]
    b_follower_count = account_b["follower_count"]
    is_correct = check_answer(guess, a_follower_count, b_follower_count)

    if is_correct:
        score += 1
        print(f"You're right! current score {score}")
    else:
        print(f"sorry thats wrong. Final score: {score}")
        game_should_continue = False
```

PENJELASAN: UNTUK MENGGANTIKAN AKUN B LAMA JADI A BARU

```
account_a = account_b  
account_b = random.choice(data)  
if account_a == account_b:  
    account_b = random.choice(data)
```
